Section Overview

Logic elements

This section gives basic specifications for Vickers logic element and pressure compensator threaded cartridge valves. Its purpose is to provide a quick, convenient reference tool when choosing these valves or designing a system using these components.

All cartridges have hardened and ground spools, and/or honed sleeves, poppets and sharp-edged ground steel seats. This provides an excellent product that is dirt-tolerant, has reliable seating, and is suitable for fast cycling with long life.

These Vickers cartridges provide the system designer with a versatile range of elements for use in MCD packages for controlling pressure, flow and direction of flow.

The range includes:

- Pressure compensators
- Pressure compensators with priority and bypass outlets
- Differential-pressure sensing elements

The correct selection of these products can enhance machine performance, shorten the design process and minimize manufacturing costs of manifold blocks.

Differential-pressure sensing elements – DPS2

For controlling pressure, flow or direction (including 3- and 4-way bridge circuits) the DPS2 is used with the aid of external pilot operators. The DPS2 elements are function building blocks which respond to pressure differential signals, providing the capacity to switch or modulate flows up to 303 L/min (80 USgpm) and pressure to 350 bar (5000 psi).

The choice of pilot arrangements related to DPS2 variants can minimize the number of construction holes in a manifold, simplifying design and reducing costs.

All poppet type DPS2 elements have recently been upgraded to 350 bar (5000 psi).

Flow compensators – PCS3

An essential component of a pressure compensated flow control which, with an external fixed or variable orifice, provides the required compensated flow characteristic. Excess flow is diverted at maximum system pressure. Excess fluid upstream must be diverted e.g. through a relief to tank.

Pressure compensator with priority and bypass outlets –PCS4

Similar in function to the PCS3. The major difference is that excess flow is diverted at priority flow pressure, instead of at maximum system pressure, as is the case with PCS3 compensators. The excess flow can pass to a secondary circuit or to tank.

Application Examples

DPS2 Logic elements for pressure control

Pressure control functions

Pressure relief or Sequence example

With external pilot supply and pilot relief

Pressure relief or Sequence example

With internal pilot supply and pilot relief

Pressure reducing example

Non-relieving type

Application Examples

DPS2 Elements for pressure control

Accumulator charging with PUV3-10 pilot stage

Pressure reducing and relieving

Hi/Low unloading circuit with externally piloted pressure sequence pilot valve

Hi/Low unloading circuit with externally piloted pressure sequence pilot valve

Application Examples

DPS2 Elements for flow control

Pressure compensated flow control example

With downstream fixed or variable restrictor

Pressure compensated priority flow control example

With fixed or variable priority flow control

Application Examples

PPS2 Elements for flow control

Load sensing priority flow control example

With pressure limiting and venting

Load sensing priority flow control example

Directional control version with pressure limiter

Application Examples

PPS2 Elements for flow control

Load sense circuit example

For parallel operation

Load sense circuit example

For priority and parallel operation

Note

1. Pressure limiting relief must be < main relief setting.
2. If pressure limiting is not used; port reliefs set < main relief are required.

DPS2 Elements for directional control

Two-way, two-position, normally open examples

Switched by 3-way, 2-position pilot valve and external pilot pressure

Switched by external pilot pressure and vented through 2-way , 2-position pilot valve

With DPS2--V cartridge and internal pilot supply
& vented through 2-way,2 position pilot valve**

With DPS2--B cartridge and internal pilot supply
& vented through 2-way,2 position pilot valve**

With DPS2--S cartridge and internal pilot supply
& vented through 2-way, 2 position pilot valve**

With DPS2--T cartridge and internal pilot supply
& switched by 3-way, 2 position pilot valve and
external pilot pressure**

With DPS2--T cartridge and internal shuttle-selected pilot supply**

With DPS2--T cartridge, external pilot supply and two-way two-position pilot valve**

Application Examples

DPS2 Elements for directional control

Three-way bridge circuits

DPS2-10

Differential pressure
sensing valve

Description

The DPS2-10 is a differential pressure sensing valve, available as either a spool or poppet type and with either, internal or external pilot.

Functional Symbols

See pages I-20 & I-21

Profile View

Operation

This valve is used as a main section of a pilot controlled valve assembly. This valve has multiple uses when used with either directional control, flow control or pressure control cartridges. Refer to application examples.

RATINGS AND SPECIFICATIONS

<i>Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)</i>	
Typical application pressure (spool type)	290 bar (4200 psi)
(poppet type)	350 bar (5000 psi)**
Rated flow	60 L/min (15 USgpm)
Pilot ratio (spool type P,V,R,F)	1:1
(poppet type B,S,T)	2:1
Internal leakage, poppet type	Port 1 to 2: < 5 drops/min max @ 350 bar (5000 psi)
Internal leakage, spool type	82 cm ³ /min. (5 in ³ /min) max @ 290 bar (4200 psi)
Temperature range	-40° to 120° C (-40° to 248° F)
Cavity	C-10-3S
Standard housing materials	Aluminum
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Weight cartridge only	0, 14 kg (0.30 lbs)
Seal kits	889650 Buna-N 889652 Viton®

6 Pressure differential (nominal)

40 – 2,8 bar (40 psi)
80 – 5,5 bar (80 psi)
160 – 8,3 bar (120 psi)

7 Special features

00 – None
(Only required if valve has special features, omit if 00)

Dimensions

mm (inch)

Torque into aluminum housing to 81-95Nm (60-70 ft. lbs)

Description

The PCS3-16 is a screw-in, pressure compensator cartridge.

Functional Symbols

Sectional View

Operation

This valve, when used with either a fixed or variable orifice between port 1 and port 3, maintains a constant flow. This is based on whatever pressure differential is chosen. Flow out of port 2, regardless of pressure, changes downstream on port 2.

RATINGS AND SPECIFICATIONS	
Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)	
Typical application pressure (all ports)	210 bar (3000 psi)
Cartridge fatigue pressure (infinite life)	210 bar (3000 psi)
Rated flow	114 L/min (30 USgpm)
Cavity	C-16-3
Standard housing materials	Customized housings are necessary for close-coupling the compensator and orifice
Temperature range	-40° to 120°C (-40° to 248°F)
Fluids	All general purpose hydraulic fluids such as: MIL-H-5606, SAE 10, SAE 20, etc.
Filtration	Cleanliness code 18/16/13
Weight cartridge only	0,38 kg (0.84 lbs)
Seal kits	565811 Buna-N 889610 Viton®
Viton is a registered trademark of E.I. DuPont	

Performance Characteristics

Cartridge only

A – 2,8 bar (40 psi) (control ΔP)
B – 5,5 bar (80 psi) (control ΔP)
C – 11,0 bar (160 psi) (control ΔP)

1 Function PCS3 – Pressure compensator restrictive type	3 Seals Blank – Buna-N V – Viton	5 Spool seals Blank – No seal on spool S – Seal on spool (For load holding applications where leakage from port 1 to 2 could cause cylinder drift, use of seal will increase hysteresis)	6 Pressure differential (nominal) 40 – 2,8 bar (40 psi) 80 – 5,5 bar (80 psi) 160 – 11,0 bar (160 psi)
2 Size 16 – 16 Size	4 Port size 0 – Cartridge only (Customized housings are necessary for close-coupling, compensator and orifice)		7 Special features 00 – None (Only required if valve has special features, omit if 00)

Dimensions

mm (inch)

Torque into aluminum housing to 108-122 Nm (80-90 ft. lbs)

Description

The PCS3-20 is a screw-in, pressure compensator cartridge.

Dimensions

mm (inch)

Torque into aluminum housing to 128-155 Nm (95-115 ft. lbs)

Description

The PCS4-10 is a screw-in, pressure compensator cartridge for the use as a bypass or priority flow control.

Functional Symbols

Sectional View

Operation

This valve, when used with either a fixed or variable orifice on port 4, maintains a constant flow out port 3, regardless of pressure changes downstream of port 3. This is based on whatever pressure differential is chosen. All flow in excess of the priority requirement is bypassed from port 1 to port 2. If the priority port is deadheaded, the valve will try to direct flow out of the priority port and shut off the bypass flow, blocking of all flow.

RATINGS AND SPECIFICATIONS

<i>Performance data is typical with fluid at 21,8 cSt (105 SUS) and 49°C (120°F)</i>	
Typical application pressure (all ports)	210 bar (3000 psi)
Cartridge fatigue pressure (infinite life)	210 bar (3000 psi)
Rated flow	38 L/min (10 USgpm)
