This product has been designed and tested to meet specific standards outlined in the European Electromagnetic Compatibility Directive (EMC) 89/336/EEC, amended by 91/263/EEC, 92/31/EEC and 93/68/EEC, article 5. For instructions on installation requirements to achieve effective protection levels, see this leaflet and the Installation Wiring Practices for Vickers™ Electronic Products leaflet 2468. Wiring practices relevant to this Directive are indicated by £ Electromagnetic Compatibility (EMC).

### General Description

Vickers™ KBDG5V-5/7/8/10 are solenoid operated directional control, non-feedback type proportional valves.

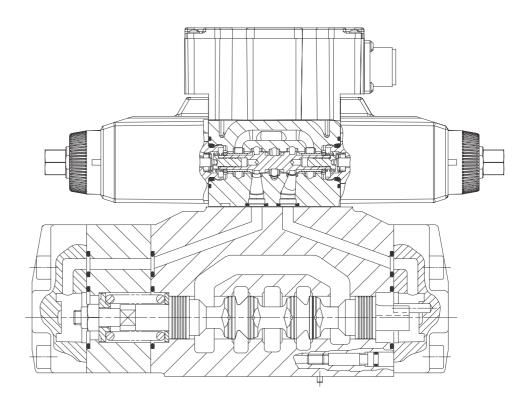

These are two-stage proportional directional control valves in which the main-stage spool is positioned according to the output from an integrally mounted proportional, solenoidoperated, pressure-reducing valve. Direction of main-spool travel depends upon which of the two solenoids of the pilot valve is energized and the amount of travel is dependent upon the current input to the solenoid.

At any intermediate position of the main spool, a force balance exists between the controlled, reduced pilot pressure acting on the spool end and the opposing centering spring, plus the action of flow forces. There is no electrical feedback of the main-stage spool position. This range of valves offers effective and economic solutions for applications having repetitive load conditions throughout each operating cycle, e.g. mold closure /opening in plastics molding machinery.

### Standard Features and Benefits

- These global products, manufactured to world-class quality standards, are sold and serviced throughout the world.
- These valves open up expanded application opportunities as a cost effective alternative to feedback-type proportional and servo valves.
- Auxiliary DIN-rail mounted function modules available.

### Number, 10 Series

. Installation ered for design respectively

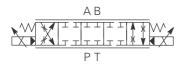

Valves with integral amplifiers are supplied with or without the metal 7-pin plug. The Vickers™ plug, part no. 934939, must be correctly fitted to ensure that the EMC rating and IP67 rating are achieved. The plug retaining nut must be tightened to 2-2 5 Nm (15must be tightened to 2-2,5 Nm (1.5-2.0 lbf ft) to effect a proper seal.

### Performance **Characteristics**

### Data is typical with fluid at 36 cSt (168 SUS) and 50°C (122°F).

### **Minimum Pressure**

KBDG5V-5/7/8 For full flow performance, pilot pressure ≥45 bar (650 psi).

KBDG5V-10 For full flow performance, pilot pressure ≥28 bar (405 psi).

i.e.

Pressure at port P for internal pilot supply.

or

Pressure at port X for external pilot supply.

### **Pilot Drain Application Notes**

External pilot drain is the recommended configuration.

Internal pilot drain is possible where a stable "T" port pressure, not exceeding 8 bar (116 psi), can be guaranteed.

Any pressure surges at the "T" port (drain) will cause the main spool to move and change the valve

output. This possibility is eliminated by the use of an external drain.

### Maximum Pressures, bar (psi) For models without integral pilot pressure reducer

MODEL	PILOT PRESSURE SOURCE	MODEL CODE 7	PORTS P, A, B	т	x	Υ†
KBDG5V- <b>5</b>	External	E	315	210	200	8
			(4500)	(3000)	(2900)	(116)
	Internal	Omit	200§	210		8
			(2900)	(3000)	-	(116)
KBDG5V- <b>7/8</b>	External	E	350	350	200	8
			(5000)	(5000)	(2900)	(116)
	Internal	Omit	200§	350		8
			(2900)	(5000)		(116)
KBDG5V- <b>10</b>	External	E	350	350	40	8
			(5000)	(5000)	(580)	(116)
	Internal	Omit	40	350♦	_	8
			(580)	(5000)	•	(116)

### For models with integral pilot pressure reducer

KBDG5V- <b>5</b>	External	EX	315	210	315	8
			(4500)	(3000)	(4500)	(116)
	Internal	Х	315	210		8
			(4500)	(3000)	-	(116)
KBDG5V- <b>7/8</b>	External	EX	350	350*	315	8
			(5000)	(5000)	(4500)	(116)
	Internal	Х	350	350♣		8
			(5000)	(5000)	-	(116)
KBDG5V- <b>10</b>	External	EX	350	350♦	315	8
			(5000)	(5000)	(4500)	(116)
	Internal	Х	350	350♦		8
			(5000)	(5000)		(116)

When using internal pilot pressure, port X should be plugged at the subplate or manifold face (e.g. manifold not drilled for connection to port X).

The maximum pressure for ports A and B is: 310 bar (4500 psi) for size 5; 350 bar (5000 psi) for sizes 7 and 8. §

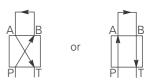

See "Pilot Drain Application" note. †

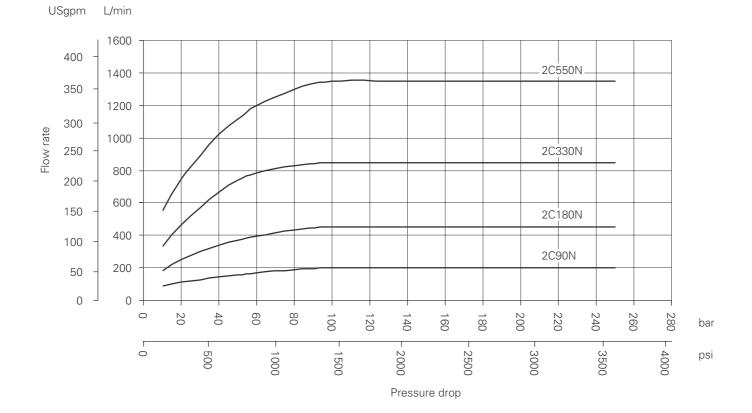

- Pilot must be externally drained, otherwise "Y" port pressure applies. ٠
- Pilot must be externally drained, otherwise "T" port pressure limited to 210 bar (3000 psi). .

	Less than	Current	Current	P to B
	12 mA	GND	return	

▲ In valves with PH7 or PR7 type electrical connection.

### Wiring

Connections must be made via the 7-pin plug mounted on the amplifier. See this leaflet and Installation Wiring Practices for Vickers™ Electronic Products leaflet 2468. Recommended cable sizes are:

### **Power Cables**

For 24V supply: 0,75 mm<sup>2</sup> (18 AWG) up to 20m (65 ft) 1,00 mm<sup>2</sup> (16 AWG) up to 40m (130 ft)

### **Signal Cables**

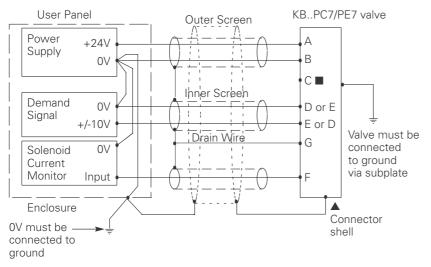

0,50 mm<sup>2</sup> (20 AWG)

### Screen (Shield)

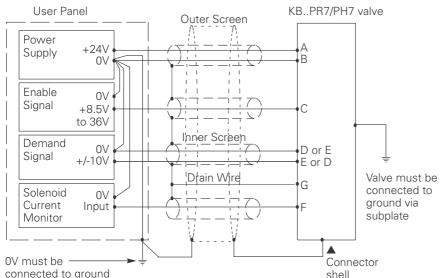

A suitable cable would have 7 cores, a separate screen for the signal wires and an overall screen. Cable outside diameter 8,0-10,5 mm (0.31- 0.41 inches). See connection diagrams on next page.

### **Typical Connection Arrangements**

### Wiring Connections

### Wiring Connections for Valves with "Enable" Feature

### ■ Pin C may be connected to ground or left unconnected.

### ▲ Note:

In applications where the valve must conform to European RFI/EMC regulations, the outer screen (shield) must be connected to the outer shell of the 7-pin connector, and the valve body must be fastened to the earth ground. Proper earth grounding practices must be observed in this case, as any differences in command source and valve ground potentials will result in a screen (shield) ground loop.

connected to ground

## Warning

Electromagnetic Compatibility (EMC)

It is necessary to ensure that the valve is wired up as above. For effective protection the user electrical cabinet, the valve subplate or manifold and

the cable screens should be connected to efficient ground points. The metal 7-pin connector part no. 934939 should be used for the integral amplifier.

In all cases both valve and cable should be kept as far away as possible from any

sources of electromagnetic radiation such as cables carrying heavy current, relays and certain kinds of portable radio transmitters, etc. Difficult environments could mean that extra screening may be necessary to avoid the interference.

It is important to connect the 0V lines as shown above. The multi-core cable should have at least two screens to separate the demand signal and monitor output from the power lines.

The enable line to pin C should be outside the screen which contains the demand signal cables.

#### **Fluid Cleanliness**

Proper fluid condition is essential for long and satisfactory life of hydraulic components and systems. Hydraulic fluid must have the correct balance of cleanliness, materials and additives for protection against wear of components, elevated viscosity and inclusion of air.

Recommendations on contamination control methods and the selection of products to control fluid condition are included in publication 9132 or 561, "Guide to Systemic Contamination Control". The book also includes information on the concept of "ProActive Maintenance". The following recommendations are based on ISO cleanliness levels at 2 µm, 5 µm and 15 µm.

For products in this catalog the recommended levels are: 0 to 70 bar (1000 psi)..18/16/13 70+ bar (1000+ psi)...17/15/12

Vickers<sup>™</sup> products, as any components, will operate with apparent satisfaction in fluids with higher cleanliness codes than those described. Other manufacturers will often recommend levels above those specified.

Experience has shown, however, that life of any hydraulic components is shortened in fluids with higher cleanliness codes than those listed above. These codes have been proven to provide a long trouble-free service life for the products shown, regardless of the manufacturer.

### **Hydraulic Fluids**

Materials and seals used in these valves are compatible with antiwear hydraulic oils, and with non-alkyl-based phosphate esters.

The extreme operating viscosity range is 500 to 13 cSt (2270 to 70 SUS) but the recommended running range is 54 to 13 cSt (245 to 70 SUS).

#### Installation

The proportional valves in this catalog can be mounted in any attitude, but it may be necessary in certain demanding applications, to ensure that the solenoids are kept full of hydraulic fluid. Good installation practice dictates that the tank port and any drain port are piped so as to keep the valves full of fluid once the system start-up has been completed.

#### Mounting Bolt Kits

For KBDG5V-5 BK02-156493M (metric) BK590720 (inch)

For KBDG5V-7 BKDG7M (metric) BK590724 (inch)

For KBDG5V-8 BKDG8-655M (metric) BKDG06-635 (inch) For KBDG5V-10 BKDG10636M (metric) BKDG10636 (inch)

If not using recommended Vickers™ bolt kits, bolts used should be to ISO 898, 12.9 or better.

#### Mounting Bolt Torques

Recommended torques with threads lubricated

### For KBDG5V-5

M6 or <sup>1</sup>/4"-20 UNC bolts: To 210 bar (3000 psi) 14 Nm (10.3 lbf ft) To 310 bar (4500 psi) 20 Nm (14.75 lbf ft)

For KBDG5V-7 M10 or <sup>3</sup>/8"-16 UNC bolts: 49 to 59 Nm (36 to 43 lbf ft) plus

M6 or <sup>1</sup>/4"-20 UNC bolts 9 to 14 Nm (6.6 to 10.3 lbf ft)

### For KBDG5V-8

M12 or <sup>1</sup>/2"-13 UNC bolts 103 to 127 Nm (76 to 93 lbf ft)

### For KBDG5V-10

M20 or <sup>3</sup>/4"-10 UNC-2B bolts 185-220 Nm (250-300 lbf ft)

#### Seal Kits (Mainstage Only)

KBDG5V-5.....565143 KBDG5V-7....02-351175 KBDG5V-8....02-352520 KBDG5V-10.....02-329888

#### Plugs

7-pin plug (metal) 934939 7-pin plug (plastic) 694534 (Metal plug must be used for full EMC protection) Note: An alternative metal connector which gives EMC protection but not IP67 rating is available from ITT-Cannon, part number CA06-COM-E-14S-A7-P.

#### **Service Information**

The products from this range are preset at the factory for optimum performance; disassembling critical items would destroy these settings. It is recommended that if any mechanical or electronic repair is necessary, valves should be returned to the nearest Eaton Hydraulics repair center. The products will be refurbished as necessary and retested to specification before return.

Field repair is restricted to the replacement of the seals.
