

# Series CST - CSV and CSH magnetic proximity switches

Reed, Electronic

- » Designed to fit into the grooves provided in the profile barrel of the cylinder
- » The three Series CST - CSV - CSH are suitable for the whole Camozzi range of cylinders
- » With or without M8 connector

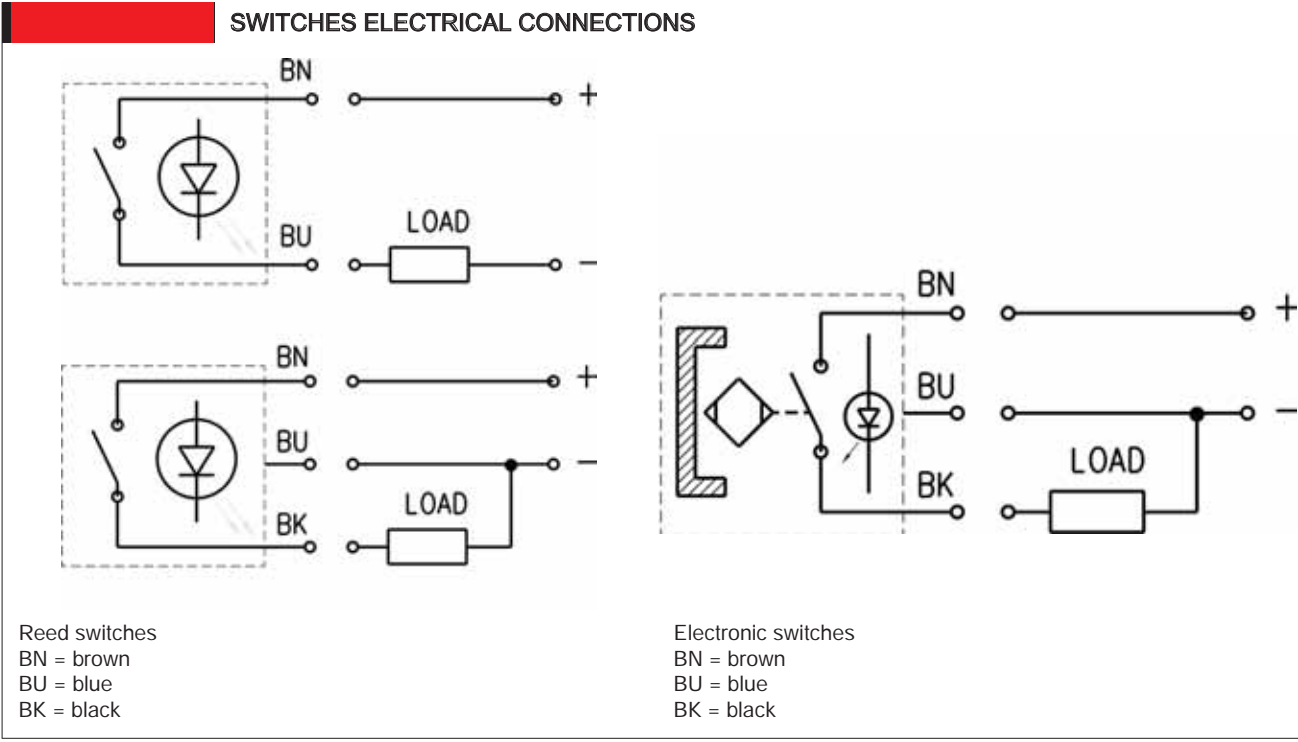

These switches are available in two different versions: Reed with mechanical switching and electronic with electronic switching. The electronic versions are suggested for heavy duty with frequent operations and strong vibrations.

Series CST-CSV-CSH magnetic proximity switches define the position of the cylinder piston. When the internal contact is actuated by a magnetic field, the sensors complete an electrical circuit and provide an output signal to actuate directly a solenoid valve or a PLC. A yellow LED diode shows when the internal magnetic contact is closed.

## GENERAL DATA

<b>Models</b>	CST-... CSV-... CSH-...
<b>Operation</b>	Reed contact Electronic
<b>Type of output</b>	Static or electronic PNP
<b>Type of contact</b>	Normally Open (NO) or Normally Closed (NC) contacts
<b>Voltage</b>	See model characteristics
<b>Max current</b>	See model characteristics
<b>Max load</b>	Reed switches 8 W DC and 10 VA AC Electronic switches 6 W DC
<b>Protection</b>	IP 67
<b>Materials</b>	Plastic body encapsulating epoxy resin cable in PVC connector PVR connector body in PU
<b>Mounting</b>	Directly into the grooves, or by means of adapters.
<b>Signalling</b>	By means of yellow diode Led
<b>Protections</b>	See model characteristics
<b>Switching time</b>	Reed switches <1,8 ms Electronic switches <1 ms
<b>Operating temperature</b>	-10 °C ÷ 80 °C
<b>Electrical duration</b>	Reed switches 10.000.000 cycles Electronic switches 1.000.000.000 cycles
<b>Electrical connection</b>	cable 2x0,14 (2m) high flexibility cable 3x0,14 (2m) high flexibility connector M8 and cable 0,3 m

## Connecting schemes in series

1

MOVEMENT

The Reed version with 3 wires allows the connection of several sensors in series, as there is no voltage drop between the supply and the load (see connecting scheme).

The voltage drop is 2,8V for the Reed sensors with 2 wires and 1V for Hall effect sensors with 3 wires.

## Useful information for correct use of the magnetic sensors

The magnetic sensors consist of a reed switch which is enclosed in a glass bulb containing a rarified gas. The contacts, which are made of magnetic material (nickel-iron), are flexible and are coated, at the contact points with a high quality non-arcing material.

Switching is effected by means of a suitable magnetic field and actuation is achieved by means of the permanent magnet inside the piston. The two sensors are of the normally open type and, therefore, when they are subject to the effect of the magnetic field, they close the circuit.

The operating field of the sensors with respect to the magnetic piston is shown in this picture. The dimension  $b$  indicates the amplitude of the magnetic field or switching field during which the circuit is closed. The value  $H$  represents the operational hysteresis of the sensor with respect to the form and amplitude of the magnetic field. The operating field, as a result of hysteresis, is displaced by the dimension  $H$  in the opposite direction to movement of the piston.

The values  $b$  and  $H$  are shown in the table and are classified according to bore.

The maximum speed permitted for each cylinder is a function of the value  $b$  and the response time of the various components connected after the sensor.

The maximum speed for a cylinder guided by magnetic sensors is calculated as follows:  $b / t = \text{Speed}$

where:  $b$  = contact stroke in mm (see table)

$t$  = total reaction time in milli seconds of electric control components connected after the sensor

Speed = maximum speed in m/second

**CONTACT STROKE AND HYSTERESIS**

Useful information for correct use of the magnetic sensors:

H = operational hysteresis of the sensor with respect to the form and amplitude of the magnetic field  
 b = contact stroke in mm

### Sensors Series CST - CSH

CST/CSH sensors can be directly mounted on the following cylinders:

- Series 31 - 31R
- Series 32 - 32R
- Series 52
- Series 61
- Series 62 (CSH only)
- Series 69
- Series QC - QCBF - QCTF

### Series CSV Sensors

CSV sensors must be assembled directly into the groove of cylinders:

- Series 50  $\varnothing$  16÷25
- Series QP - QPR  $\varnothing$  12÷16

### Circular connectors M8, 3 Pin Female

With PU sheathing, non shielded cable.  
Protection class: IP65

- BN = Brown
- BK = Black
- BU = Blue

In case of the use of sensors with two wires with connector M8 models CST-250N, CSV-250N, CSH-253 connect the brown wire to the input (+) and the black wire to the load.
